

Professional Site Cameras Simplified

Simply put, Sensera Systems provides the most flexible, reliable and affordable camera solutions in the industry.

Our solutions are purpose built for the rigors of temporary and permanent outdoor and remote sites. Deployed by hundreds of municipal and industrial customers across North America, our solutions help stakeholders manage and protect a variety of assets, support safety, and oversee logistics from any location in real-time. Securely managed from a single cloud-based platform, our solutions provide the most reliable and cost-effective visual monitoring and surveillance in the industry, all in a hassle-free package that is easy to set up and use within minutes.

Sensera Systems helps Parks, Public Works, Water Utilities, Police & Fire as well as a variety of industrial groups, improve safety, regulatory and budget compliance, stakeholder transparency, project management, and site security.

Sensera Systems' end-to-end solutions can be deployed as needed, incrementally, and without large up-front network or infrastructure costs.

-  4G/LTE & WiFi Connectivity
-  Solar + AC or AC Only Models
-  Compact Design
-  No Complex Configuration or Setup
-  Remote Site Access
-  Real-time & Recorded Video Capture
-  Multi-application
-  Free Mobile Apps

FLEXIBILITY

Sensera Systems solutions provide maximum flexibility for ideal system placement, installation, and use by stakeholders at any level and are easy to setup and use within minutes.

Some camera systems require an electrician to run power, an IT technician to run Ethernet, two or more workers to heft and install the bulky equipment, and compromises to be made in camera placement to make it all work. Our systems are completely DIY, requiring no power, no Ethernet and no compromises. When needs change, cameras can be relocated quickly and inexpensively.

“ We were looking for a cost effective site camera that provided a flexible public page and sharing feature to keep all our stakeholders engaged in the project. Sensera Systems cameras offered time-lapse, LiveView, recording and video streaming. The fact that they are solar powered and wireless allows us to move the cameras as this large project progresses and simplifies installation and lowers our costs. The public URL feature made it easy for us to share real-time progress with all the stakeholders. ”

Mark Thomas, Sr. Infrastructure Technician, Denver Water

Not only are our systems quick and easy to install at the beginning of a project, they're also simple to relocate for alternative views or move to a new site upon project completion. Convenient accessories like our telescoping pole eliminate the need for a ladder or lift. Simply mount the camera and solar panel to the pole at ground level and then extend the pole to the desired height.

Additionally, our solutions are multi-application. Meaning the same solution can help you with full project documentation, increased collaboration, capture of safety incidents, improved site security, and more efficient dispute resolution.

Supports a variety of use-cases and applications

- Public Works temporary and construction projects
- Utility asset monitoring and remote site security
- Parks & Rec public websites
- Police special events support
- Emergency Response
- Environmental remediation documentation
- Enforcement of littering and dumping laws
- Watershed and flood monitoring

// I selected the Sensera Systems MC-68 for monitoring requirements at these sites, and the SiteWatch-PRO to monitor nautical traffic approaching the structure. These cameras had the solar and cellular operation we needed for this application, and the high quality pictures and video were useful to us. The cell service at these sites fluctuates a great deal, which can slow image uploads. But the cameras have been robust in that regard. The SiteWatch-PRO camera motion detection works very well for capturing all vessel traffic nearing the structure. //

RELIABILITY

Sensera Systems was founded on the principal that reliable site monitoring should be accessible for companies and projects of every size. Real-time visual monitoring and documentation is critical on every project whether capturing safety violations/incidents, arrival/departure/productivity of workers and subs, providing stakeholder transparency, planning material logistics, surveilling for trespassers, vandalism and theft, or for dispute resolution.

Our patented low-power technology enables our cameras to operate for up to 10 days (XL models) with no power or network connectivity. Captured images and video are processed in real-time inside the camera and can be stored on the on-board storage. Our multi-carrier cellular interface allows the system to connect to whatever network is best for the camera's location

automatically, to ensure continued seamless coverage, anywhere. In addition, Sensera smart-camera software and hardware is designed to be completely self-monitored. Temperature, battery levels, solar charging, network connectivity and bandwidth are all monitored continuously. Alerts are sent to help ensure zero downtime.

“ We felt that having a live camera accessible to the public would be great way to mitigate the parking situation and give the public a better visitor experience. But we did not want to spend a fortune on a custom solution that would require design, engineering and maintenance. When Capture Technologies showed us the Sensera Solution, it seemed a perfect fit for our needs. Once we got a pole in place, installation of the camera was a breeze and the public web page feature dropped right into our website, allowing the public to see real-time status of the parking areas. We have been very happy with the Sensera camera solution and expect that we will find other applications for the technology. ”

AFFORDABILITY

Sensera Systems offers professional camera solutions at an affordable price for projects of any size or duration, allowing you to achieve more site coverage for less. Don't settle for capturing only a portion of your site or project. We've made it possible to have comprehensive 24/7 real-time viewing and capture of your entire site. No contracts and no hidden fees.

- Purchase or lease of camera systems
- Free Shipping & Returns
- No Contracts
- No Added or Hidden Fees
- 30-Day Risk-Free Guarantee
- Top technical support and onboarding for your team

“ This camera is located in an extremely remote area, 40' in the air, on a single utility pole, requiring arrangements for high lift/ bucket truck equipment to be transported through very rough and often wet terrain to the camera location...” Through Sensera's focused efforts, "...the shipment was assembled, invoiced, paid, and received the next day! The logistics and cost required made it critical the solar panel and parts be expedited and... Sensera made it happen on schedule. Thank you for taking the extra effort. ”

Clayton Robertson, Principal Scientist, VHB
